Iron Speed Version 8.0 Released Add Charts and Dashboards to Applications without Programming

San Jose, CA – March 15th, 2010. Software development tools-maker Iron Speed, Inc. released Iron Speed Designer Version 8.0, the newest version of its popular Web 2.0 application development tool. Iron Speed Designer builds database applications for the .NET, Microsoft SharePoint and Cloud environments. The new charting and dashboard features in Iron Speed Designer save a lot of time, helping IT departments build productivity-enhancing applications rapidly.

Visualize Your Data with Charts

In Iron Speed Designer V8.0, developers can incorporate charts without programming. Developers simply drag charts from the toolbox onto a page. Charts listed in the toolbox are automatically configured, based on which chart you select and where you place it on the page. This functionality makes it easy to visualize the information in a live application.

"V8.0 charts are great for prototyping! In many cases, the client doesn't know what they want until they see it. Now it's very easy to drag and drop different charts onto a page so they can preview their options."
– George Elder, Developer, Adonais Software

Dashboards Summarize Key Performance Indicators

New in V8.0, developers can build dashboard reports containing summary data. This enables you to add calculated values such as sums, record counts, and averages onto a dashboard page. Developers can drag calculated values onto a page, reducing the need to use third-party reporting tools.

"The ability to create actionable reports without a lot of customization allows me to view important trends in my business as they happen. This information is valuable to our success." – Dean Pepper, Developer, Dot Net Architect

Iron Speed Designer Version 8.0 System Requirements

Iron Speed Designer runs on Microsoft Windows 7, Windows Vista, Windows XP, and Windows Server 2003 and 2008. It builds .NET Web applications for Microsoft SQL Server, Oracle, Microsoft Access and MySQL databases. These applications may be deployed on any machine running the .NET Framework.

About Iron Speed, Inc.

Iron Speed is the leader in enterprise-class application development. Our software development tools build database and reporting applications in significantly less time and cost than programming. Our flagship product, Iron Speed Designer, is the fastest way to deliver applications for the Microsoft .NET, Microsoft SharePoint and software-as-a-service cloud computing environments.
